

Caroline Chebli, MD

I am currently living in Sarasota, Florida. I completed my fellowship at the University of Washington in 2006 and had been in private practice until recently. From 2016-2017 I completed another fellowship in Orthopaedic Oncology at Moffitt Cancer Center. During my time at Moffitt, I was able to combine my upper extremity expertise with the oncology database and complete two research projects and present the results at the annual MSTS meetings. I was also involved in developing a protocol to harvest tumor cells and bone marrow to characterize marrow infiltrating lymphocytes from bone sarcomas. In addition, I designed a partial scapula with a total humerus and total elbow endoprosthesis for a patient. Currently, I am working at the James A Haley VA Hospital in Tampa, Florida. I am able to have a shoulder practice as well as an oncology practice. I work with the University of South Florida residents and this has made my career so fulfilling. I am now a member of ASES as well as the MSTS.
